

IT Security Solutions

that protect your critical business assets...

ENSURING ADEQUATE IT SECURITY CAN BE A MOVING TARGET!

With the robust adoption of social media, mobile computing and cloud computing, your network parameters continue to expand into uncharted territory. Increased entry points mean multiple security threats: uninvited visitors can sneak in and information can be siphoned out. As a result, protecting physical and digital assets can be one of your IT department's biggest challenges.

To stay agile and competitive, you must deal with two major IT security priorities:

- Business continuity requires flexible and uninterrupted access to interconnected global markets, with complete protection of corporate digital assets.
- You must stay on top of ever-changing compliance policies and standards mandated by governments, industry associations and key business partners.

THE CONEXSYS ADVANTAGE

At Conexsys Communications, we focus on you: your situation, your pain-points, your security issues and your business processes. To help drive your business success, we deliver leading-edge, cost-effective IT security solutions backed by robust levels of local customer support.

Conexsys is a recognized leader in the architecture, deployment and support of IT security solutions. We combine our rich history with a focus on continually upgrading our skills and certifications in leading security standards, products and solutions. As a result, our professionals understand the threats you face, and how to solve complex security challenges.

Conexsys Security Services

Conexsys Compliance Readiness Services

Designed to evaluate your environment and provide you with compliance information, tools and solutions to comply with the standards in your business or industry.

Vulnerability/Threat Assessment

Helps secure your network and information by proactively identifying weaknesses in your security posture.

Penetration Testing

Our security experts will perform controlled hacking exercises or penetration tests against your network (wired and wireless) and application environments to identify holes or flaws.

Content Management

Helps you monitor online activity, and allows you to take appropriate and timely action to address and resolve questionable content or websites in real-time.

Forensic Discovery Service/Incident Response

When your network and information is breached, an immediate and comprehensive response is needed. Our experts will help you reduce the time-intensive life cycle of the investigative procedure.

ENCOMPASS® Security Services (Co-Managed Services)

Once security measures are established and implemented, how do you realize your investment? With ENCOMPASS Security Services, Conexsys will administer the on-going initiative of a security readiness service, with guaranteed and manageable service levels and ROI details.

CONEXSYS IS YOUR IT SECURITY PARTNER

Conexsys is a recognized security leader. Our focus is you: your company, your pain points, your data management, your network demands, your business processes. We offer local customer support, with reliable and cost-effective security solutions.

netSecure, EXCLUSIVELY FROM CONEXSYS

Securing an IT department is not done in isolation. Understanding the business structure and data access requirements are factors of a successful strategy.

In response, Conexsys designed netSecure: a cost-effective, robust solution that combines and customizes leading-edge security and network products to suit your organizational needs.

Based on our 5-step Project Methodology, our netSecure solution allows you to:

- Assess your current security infrastructure and identify your future demands.
- Create a cost-effective, customized solution, using industry-leading components.
- Implement the solution to meet your timeline and expectations, using a best practices project management framework.
- Provide support services for ongoing IT network security management.
- Train your staff on the new policies and procedures.

With Conexsys, you have continuous, proactive IT network protection.

When you think of IT Security, think Conexsys to manage risk and reduce liabilities.

Conexsys has been successfully implementing security solutions since 1992, with the introduction of network firewalls. With security threats constantly changing and evolving, successful network monitoring and security solution design requires historical knowledge, in addition to the latest security techniques such as ethical hacking and forensic analysis.

Conexsys continues to invest in the skills and experience of our security experts, and develops relationships with leading security solution providers – to ensure you get the best security solution available to meet your unique needs.

With Conexsys as your trusted IT security partner, you can be confident your business is secure.

“Conexsys reputation within the Canadian market space, as well as their certified expertise is what attracted CyberArk.”
